FREE TECHNOLOGY HEALTH CHECK GUIDE

Safe First Checks for Common Technology Problems

FREE RESOURCE | NO SIGNUP | NO PAYMENT

Practical first-response checks for computers, internet connections, printers, email security, data protection, and everyday technology issues.

Start Simple. Protect Your Data. Avoid Making A Small Problem Worse.

This guide provides safe, low-risk checks that can be performed before seeking professional support.

IMPORTANT

This guide is not a substitute for qualified electrical, networking, cybersecurity, engineering, or repair services.

QUICK SELF-CHECKS

Start with simple, reversible actions. Protect information and stop when warning signs call for qualified help.

SAFE FIRST CHECK

1. Slow Computer

5-15 minutes

- Restart the computer.
- Close unused applications and browser tabs.
- Check available storage space.
- Install official operating system updates.
- Run a trusted antivirus scan if appropriate.

Avoid: Unknown "PC cleaner" applications from untrusted sources.

SAFE FIRST CHECK

2. Internet or Wi-Fi Keeps Disconnecting

5-10 minutes

- Check whether other devices have the same issue.
- Restart the router once.
- Move closer to the wireless access point.
- Confirm network cables and power connections.
- Check if your internet provider is experiencing an outage.

Avoid: Repeatedly changing network settings without understanding their purpose.

SAFE FIRST CHECK

3. Printer Will Not Print

10-20 minutes

- Verify paper availability.
- Check toner or ink levels.
- Confirm power and cable connections.
- Ensure the correct printer is selected.
- Clear any stuck print jobs before reinstalling drivers.

QUICK SELF-CHECKS - CONTINUED

SAFE FIRST CHECK

4. Storage Is Almost Full

10-30 minutes

- Remove unnecessary downloads.
- Empty the Recycle Bin.
- Move large archives to approved storage.
- Review duplicate files.
- Consider cloud or external backup storage.

Avoid: Deleting system files or folders to gain space.

SAFE FIRST CHECK

5. Important File Appears Missing

10-30 minutes

- Search by file name.
- Check Recent Files.
- Check Recycle Bin or Trash.
- Review cloud storage version history.
- Check shared folders and alternate save locations.

Avoid: Creating replacement files until you confirm the original cannot be recovered.

CAUTION / SECURITY

6. Suspicious Email or Link

Immediate action

- Verify the sender through another communication channel.
- Check for unusual spelling, links, or requests.
- Delete obvious phishing emails.
- Report suspicious messages where possible.
- If clicked: change affected passwords, enable MFA, monitor activity, and inform your administrator if applicable.

QUICK SELF-CHECKS - ACCOUNTS & BACKUPS

CAUTION / SECURITY

7. Shared Passwords

15-30 minutes

- Assign separate accounts to each user.
- Use strong unique passwords.
- Enable MFA on critical accounts.
- Review access permissions regularly.
- Critical systems include email, banking, business applications, and administrative accounts.

SAFE FIRST CHECK

8. No Reliable Backup

20-60 minutes

- Maintain at least one independent backup.
- Test file restoration periodically.
- Keep important copies separate from primary devices.

Remember: Cloud synchronisation is not always a complete backup solution.

STOP / SAFETY

9. Device Overheating or Unstable

Stop and assess

- Power down if there is a burning smell.
- Stop if sparks are observed.
- Do not use a swollen battery.
- Stop if excessive heat develops rapidly.
- Stop if the device repeatedly powers off.

Important: Do NOT attempt to open power supplies, batteries, or electrical equipment yourself.

QUICK SELF-CHECKS - SECURITY & UPDATES

CAUTION / SECURITY

10. Updates Keep Failing

10-20 minutes

- Record the exact error message.
- Confirm system date and time are correct.
- Verify internet connectivity.
- Restart and retry once.
- Check available storage space.

Important: Repeated failures may require technical troubleshooting.

CAUTION / SECURITY

11. Account May Be Compromised

Immediate action

- Watch for unexpected password resets, unfamiliar login alerts, lockouts, or unrecognised activity.
- Change passwords immediately.
- Enable MFA.
- Review recent sign-ins.
- Sign out of unrecognised devices and report incidents where necessary.

CAUTION / SECURITY

12. Suspicious SMS, WhatsApp, or Social Media Messages

Immediate action

- Do not click unknown links.
- Verify requests independently.
- Avoid sharing verification codes.
- Report fraudulent messages.
- Block persistent scam accounts.

WHEN TO STOP AND GET PROFESSIONAL HELP

Immediate assistance is recommended if:

- There is a burning smell.
- Sparks are visible.
- Liquid damage has occurred.
- A battery is swollen.
- Repeated data loss is occurring.
- Ransomware is suspected.
- An unknown administrator account appears.
- Critical business systems are affected.
- Financial accounts may be compromised.

WHY THIS GUIDE MATTERS

Many technology problems become worse because users:

- Follow random online fixes.
- Install untrusted software.
- Delete important files.
- Change settings without documentation.
- Ignore warning signs until failures occur.

This guide helps you perform safe first checks before taking action that could increase risk.

NEED PROFESSIONAL ASSISTANCE?

Eragonova Enterprise
Technology | Engineering | Business Solutions

We help homes, professionals, churches, and small businesses solve practical technology challenges.

- Computer Troubleshooting
- Printer Setup & Support
- Wi-Fi & Network Diagnostics
- Data Backup Solutions
- Cybersecurity Awareness Checks
- Device Health Assessments
- IT Advisory Services
